

Medical Resuscitation Pack

Product Codes: BAC0095GRN-GB-OPEN / BAC0096RED-GB-OPEN

Properties:

A compact response kit designed to meet the requirements of a medical emergency within a Dental Practice.

The kit is designed to be mounted on the wall in a strategic position. A purpose-built mounting bracket is supplied with each kit along with a pair of shoulder straps.

The complete kit and all its contents are individually bar coded and linked to our computer tracking system. This information not only identifies each customer but also enables us to produce reports detailing the expiry dates of all the consumables, drugs and oxygen within the kit.

With this information we can provide an effective monitoring service for the replacement of out of date products.

All bags are manufactured from our micrAgard materials, micragard graphics come as standard with two options;

Either our printing which has high quality reflective coverage which is impregnated into the fabric so it won't rip off. Or our embroidery which is produced in-house to the highest quality using the maximum amount of stitches possible for each design. We ensure all of our graphics look great and stay with the product for the whole of it's life.

Dimensions:

250 x 300 x 530mm
(9.8 in x 11.8 x 20.8 in)

Completed system weight:
10.5Kg

Infection control is becoming more and more of a challenge every day. Together we can minimise cross contamination of bacteria and help prevent it from spreading using our unique micrAgard products. We have produced a significant number of micrAgard products including our extensive range of Professional Emergency Services Equipment Bags and we are now a leading distributor of Byotrol sanitising sprays, wipes and solutions. Do you want to help prevent bacteria from spreading? The answer is simple... Convert to micrAgard.
