

# Cleaning Recommendations

There are a few options for cleaning your bag depending on how dirty it gets, we would recommend the following actions:

- As the material is wipe-able on both sides most things should be easily wiped/hosed off the surface. For removing accumulated dust and grit use a regular vacuum cleaner; it will brighten things up.
- For dirt that simply will not brush off, we recommend upholstery cleaner which can be obtained at most stores. Please use according to the manufacturer's instructions.
- Any stains that the upholstery cleaner won't remove – such as spots of tar, etc, try removing with white sprits. Dab it on with any piece of absorbent cloth or cotton and then wipe it off. Alternatively, try using Fairy Liquid on a damp cloth.
- DO NOT** use bleach based products under any circumstances.
- The last step in the cleaning procedure would be to clean in the washing machine using standard cleaning detergent, at up to temperatures of 40°C.
- Allow the bag to dry naturally once washed, please **DO NOT** tumble dry under any circumstances.

Infection control is becoming more and more of a challenge every day. Together we can minimise cross contamination of bacteria and help prevent it from spreading using our unique micrAgard products. We have produced a significant number of micrAgard products including our extensive range of Professional Emergency Services Equipment Bags and we are now a leading distributor of Byotrol sanitising sprays, wipes and solutions. Do you want to help prevent bacteria from spreading? The answer is simple... Convert to micrAgard.
